

Branislav Todić is an Assistant Research Scientist at the Laboratory for Process Modeling and Intensification and a Senior Teaching Assistant at the Chemical Engineering Department, Faculty of Technology and Metallurgy, University of Belgrade. He completed his Ph.D. in Chemical Engineering at the Faculty of Technology and Metallurgy, University of Belgrade in 2015. During his PhD studies (2011-2014) and postdoctoral fellowship (2015-2018) he worked as a researcher at the Chemical Engineering Program of Texas A&M University at Qatar. His main areas of interest and research include modeling and optimization of chemical reactors and other chemical engineering process systems.

He is an author of 16 publications in leading international scientific journals, one book chapter and 26 conference lectures. His work has so far been cited 250 times, with the h-index of 9 (source: Scopus, September 18, 2018). He serves as an active reviewer for a number of international scientific journals in the field of chemical engineering, including *Industrial and Engineering Chemistry Research*. He is a recipient of a scholarship from the Joint Japan-Serbia Center for the Promotion of Science and Technology of the University of Belgrade for the school year 2018/2019, for work on the project *Modeling and simulations of continuous oscillatory flow reactors*. The scholarship is funded from a grant provided by the ITO Foundation for International Education Exchange from Tokyo.
